

Amendments to the Claims

This listing of claims will replace all prior versions and listings of claims in the application:

Listing of Claims

Claim 1 (Withdrawn): An information processing apparatus for studying a target case by communicating information through a network, comprising:

request means for requesting a first inspector to study the target case; and

detection means for detecting access to a database relating to the target case by the first inspector.

Claim 2 (Withdrawn): The apparatus according to claim 1, further comprising:

report means for reporting a detection result obtained by said detection means to a requester who has requested the first inspector to study the case.

Claim 3 (Withdrawn): The apparatus according to claim 2, wherein

said report means checks an access state by the first inspector at predetermined time intervals, and issues a predetermined reminder when no access is detected a predetermined time after the request.

Claim 4 (Withdrawn): The apparatus according to claim 1, further comprising:

suspension means for suspending a request from a requester who has requested the first inspector to study the case at an instruction of the requester.

Claim 5 (Withdrawn): The apparatus according to claim 4, further comprising:
re-request means for requesting a second inspector different from the first inspector at an inspection of the requester to accept a request of a requester who has requested the first inspector to study the case.

Claim 6 (Withdrawn): An information processing method for studying a target case by communicating information through a network, comprising the steps of:
requesting a first inspector to study the target case; and
detecting access to a database relating to the target case by the first inspector

Claim 7 (Withdrawn): An program storage medium storing a program for realizing an information processing method for studying a target case by communicating information through a network, comprising:
a code for requesting a first inspector to study target case; and
a code for detecting access to a database relating to the target case by the first inspector.

Claim 8 (Withdrawn): An information processing apparatus for studying a target case by communicating information through a network, comprising:
a table relating to organization information; and
management means for selectively performing by referring to said table a first study management mode in which the target case is studied through a predetermined path, and a second study management mode in which an inspector who inspects the target case sequentially requests a subsequent inspector to study the case.

Claim 9 (Withdrawn): The apparatus according to claim 8, wherein
said table relating to the organization information indicates a hierarchical management
structure in a company.

Claim 10 (Withdrawn): The apparatus according to claim 8, further comprising:
a study path pattern table storing a plurality of patterns of study paths for the first study
management mode.

Claim 11 (Withdrawn): The apparatus according to claim 8, wherein
in the second study management mode, a request for study is issued by specifying a
name of an inspector without using said table relating to the organization information.

Claim 12 (Withdrawn): An information processing method for studying a target case by
communicating information through a network, comprising the steps of:
referring to a table relating to organization information; and
performing a managing step by selectively performing based on said referring step a
first study management mode in which the target case is studied through a predetermined path,
and a second study management mode in which an inspector who inspects the target case
sequentially requests a subsequent inspector to study the case.

Claim 13 (Withdrawn): A program storage medium storing a program for realizing an information processing method for studying a target case by communicating information through a network, comprising:

a code for referring to a table relating to organization information; and

a code for realizing a managing step by selectively performing based on said referring process a first study management mode in which the target case is studied through a predetermined path, and a second study management mode in which an inspector who inspects the target case sequentially requests a subsequent inspector to study the case.

Claim 14 (Withdrawn): An information processing apparatus for generating a document relating to a patent application by communicating information through a network, comprising:

association means for dividing a patent application procedure into a plurality of steps, and associating a reference document used in generating a document in step units with a due date of generation of the document; and

management means for managing generation of the document.

Claim 15 (Withdrawn): The apparatus according to claim 14, wherein said plurality of steps contain an application and a rejection reason response.

Claim 16 (Withdrawn): The apparatus according to claim 14, wherein

said management means manages generation of the document by making links to a management database for item management and a document database for document management.

Claim 17 (Withdrawn): The apparatus according to claim 14, wherein
said management means manages generation of the document by defining a virtual file
in a network.

Claim 18 (Withdrawn): The apparatus according to claim 17, wherein
a timing of generating a file is defined in said step units relating to the virtual file.

Claim 19 (Withdrawn): The apparatus according to claim 17, wherein
a process performed when a file is generated is defined in said step units relating the
virtual file.

Claim 20 (Withdrawn): The apparatus according to claim 17, wherein
a timing of extinguishing a file is defined in said step units relating to the virtual file.

Claim 21 (Withdrawn): The apparatus according to claim 17, wherein
a process performed when a file is extinguished is defined in said step units relating the
virtual file.

Claim 22 (Withdrawn): The apparatus according to claim 17, wherein
a related document is defined in said step units relating to the virtual file.

Claim 23 (Withdrawn): The apparatus according to claim 17, wherein

a study and approval path is defined in said step units relating to the virtual file.

Claim 24 (Withdrawn): The apparatus according to claim 17, wherein
said virtual file can be copied, and simultaneously distributed through a network using a plurality of paths.

Claims 25 and 26 (Cancelled).

Claim 27 (Currently Amended): An information processing apparatus for accumulating technical documents relating to a patent application, comprising:

accumulation means for accumulating information about a related prior art document which has been cited by the patent office for examining the patent application and a foreign patent application corresponding to the patent application; and

display control means for displaying a list of the prior art documents of said patent application and a ~~corresponding~~ list of the foreign patent application ~~of~~ corresponding to said patent application accumulated in said accumulation means in the same window.

Claim 28 (Previously Presented): The information processing apparatus according to claim 27, wherein

said display control means displays a flag indicating whether or not a prior art disclosure procedure has been performed on the prior art document.

Claim 29 (Previously Presented): The information processing apparatus according to claim 27, wherein

said display control means displays descriptions indicating correspondence between the prior art document and a rejection reason.

Claim 30 (Previously Presented): The information processing apparatus according to claim 27, wherein

said display control means displays a list of applications by which the prior art document has been cited relating to the prior art document.

Claim 31 (Currently Amended): An information processing method for accumulating technical documents relating to a patent application, comprising the steps of:

accumulating information about a related prior art document which has been cited by the patent office for examining the patent application and a foreign patent application corresponding to the patent application; and

displaying and controlling a list of the prior art documents of said patent application and a ~~corresponding~~ list of the foreign patent application ~~of~~ corresponding to said patent application accumulated in said accumulation step in the same window.

Claim 32 (Currently Amended): A program storage medium storing a program for realizing an information processing method for accumulating prior art documents relating to a patent application, comprising the steps of:

a code for realizing an accumulation step of accumulating information about a related prior art document which has been cited by the patent office for examining the patent application and a foreign patent application corresponding to the patent application; and

a code for realizing a displaying and controlling a list of the prior art documents of said patent application and a ~~corresponding~~ list of the foreign patent application ~~of~~ corresponding to said patent application accumulated in said accumulation step in the same window.
